PREFACE.

THE Library of the University of London, so far as at present formed, consists principally of the Library of George Grote, Esq., for many years Vice-Chancellor of the University, and of that of the late Professor Augustus de Morgan.

Mr. Grote's Library was bequeathed to the University by a Codicil to his Will dated the 9th May, 1871. The bequest was subject to any selection or disposition of the books which might be made by Mrs. Grote during her life; but the greater part of them was at once transferred by Mrs. Grote to the University.

The "De Morgan Library," comprising a valuable collection of mathematical works, was purchased in its entirety by Lord Overstone, and was presented by his Lordship to the University "as a testimony of his appreciation of the service which that body has rendered to the extension and improvement of Education in all its branches throughout the United Kingdom, and in the hope that it may prove the first fruits of a Library which shall, ere long, become such in all respects as the University of London ought to possess."

Previously, however, to the above-named bequest and gift, Mr. Julian Goldsmid, with a view to the establishment of a first-class University Library, had offered a donation of £1000, payable by equal instalments in ten years, to be applied in the purchase of Classical (Greek and Latin) books; and other annual or special donations have been made by the Chancellor, Earl Granville, by the Vice-Chancellor, Sir John Lubbock, and by the Right Hon. Robert Lowe, Member for the University.

Pending the completion of the Catalogue these donations have, for the most part, been allowed to accumulate, but will now be applied to the extension of the Library.

The sole regular fund on which the Library depends for its maintenance and extension is a grant from the Treasury of £100 per annum. This item was first included in the Estimates of the University for 1873, and having been continued in subsequent years, it may doubtless be regarded as a permanent source of income. But this grant is scarcely more than sufficient to meet current expenditure, and leaves only a slender balance applicable to the purchase of new works.

This Catalogue was mainly compiled by Mr. Thomas Nichols, of the British Museum, under the direction of the Senate, and forms an interesting record of the Grote and De Morgan Libraries. It has been completed to the end of the year 1875, by the addition of a large number of Titles representing recent gifts, purchases, and a considerable further instalment of Mr. Grote's Library, forwarded by Mrs. Grote to the University.

Bridges (Noah). Lux Mercatoria: Arithmetick natural and decimal; digested into a more easie and exact method for resolving the most practical and useful questions than hath been yet published. Wherein the most critical questions of reduction, trucks, and exchanges of monies, weights and measures of forein countries, from 5 numbers to 13, heretofore wrought by 3, 4, 5, or more operations in the golden rule, are now performed by one, and the fractional parts thereof explained by the monies, weights and measures of England, and made familiar to mean capacities. With a modest examination of divers rules formerly set forth by others, and a clear eviction of their errors and insufficiency, as well in decimal as natural arithmetick. Whereunto are added tables computed for the forbearance, discompt, and purchase of annuities, leases, and pensions at 6 and 8 *l.* per cent. interest for forty years. By N. B., Esq.; . . ——. Cocker's Decimal Arithmetick: wherein is shewed the nature and use of Decimal Fractions, in the usual rules of Arithmetick, and in the Mensuration of Planes and Solids. Together with Tables of Interest and Rebate for the valuation of Leases and Annuities, present or in reversion, and rules for calculating of those Tables. Whereunto is added his Artificial Arithmetick, shewing the genesis or fabrick of the Logarithmes, and their use in the extraction of Roots, and solving of questions in Anatocisme, and in other arithmetical rules in a method not usually practised. Also his Algebraical Arithmetick, containing the Doctrine of composing and resolving an Equation; with all other rules requisite for the understanding of that mysterious art, according to the method used by Mr. John Kersey in his incomparable Treatise of Algebra. Composed by E. C., late Practitioner in the arts of Writing, Arithmetick, and Engraving. Perused, corrected, and published by John Hawkins, Writing-Master at St. Georges-Church in Southwark. [D. M.] *London*, 1685. 8vo.

Cocker (Edward). Cocker's English Dictionary, containing an explanation of the most refined and difficult words and terms in Divinity, Philosophy, Law, Physick, Mathematicks, Navigation, Husbandry, Military Discipline, with other Arts and Sciences: and the derivation of them from the Hebrew, Greek, Latin, Italian, Spanish, French, and other languages, likewise Historical Remarks. . . With brief observations upon the Reign of every English Monarch from King William the Conqueror to this time. [&c.] By E. C. . . Publish'd from the Author's Copy: and in this Second Edition very much enlarged and altered: By John Hawkins. The like never yet Extant.
